Re.: REACH statement

To whom this may concern

As our company use chemicals to manufacture our quality products we are obliged to comply with REACH requirements.

In respect of REACH terms we are defined as "Downstream user" and we manufacture articles intended not to release chemical substances. This means that we have no obligations regarding registration of chemicals. This obligation is placed "upstream" at our suppliers (or their suppliers).

We are continuously in contact with our suppliers regarding confirmation that they comply with REACH requirements.

As a company we want to use "green" technology and chemistry and we want to avoid substances from the ECHA candidate list. We follow up on the candidate list continuously.

As a result of the above stated we confirm to comply with the REACH regulation.

Do you need further clarification or should you have any questions, please contact the undersigned.

(The document is valid one year from today)
